

Fact Sheet

KANEKA Q10™

About KanekaQ10™

KanekaQ10™, the Coenzyme Q10 (CoQ10) product manufactured by Kaneka*, is a potent antioxidant that enables cells in the body to produce energy. Manufactured in Takasago, Japan and Pasadena, Texas, KanekaQ10™ is the first and only CoQ10 to be manufactured in the U.S.

KanekaQ10™ is fermented from natural yeast, making it the most bio-identical to the CoQ10 produced naturally within the body. All other CoQ10 products are made from bacteria or tobacco derivatives. Kaneka's uncompromising commitment to quality over the past 30 years has made KanekaQ10™ the industry standard in CoQ10. It is the purest commercially-available CoQ10 on the market today.

Benefits of KanekaQ10™

Because CoQ10 is essential for the optimum production of cellular energy, it enhances stamina and improves the body's overall state of health and has significant value in alleviating the effects of numerous age-related diseases and conditions such as cardiovascular disease, various neurological diseases, periodontal disease, muscular dystrophy and multiple sclerosis.

Coenzyme Q10 Depletion

- By age 20, the concentration of CoQ10 in the body begins decreasing yearly, suggesting it has a close connection with aging
- The decline in CoQ10 levels is especially high in organs that have the highest metabolic energy requirements, such as the heart
- For people taking statins used to lower cholesterol, CoQ10 depletion is especially high since statins simultaneously lower cholesterol and CoQ10 levels

KanekaQ10™ Product Support

- KanekaQ10™ is the primary CoQ10 used in FDA-approved, National Institutes of Health-funded clinical trials, and over 99 percent of all other clinical trials over the past 30 years
- KanekaQ10™ is the world's only CoQ10 with Self-Affirmed GRAS status ("generally recognized as safe") for use in foods and beverages, because it has the only supporting safety studies
- KanekaQ10™ is Genetically Modified Organism-free, allergen-free and Kosher certified

*Kaneka refers to Kaneka Group/Kaneka Corporation and Kaneka Nutrients L.P.
